

PulseFit: Business Intelligence Storytelling & Insights

(Week 4)

This report presents the final analytical narrative for the PulseFit gym network, summarizing performance trends and strategic opportunities identified through our BI solution.

1. The Narrative: From Data to Value

PulseFit entered this project with a challenge common to Tunisian fitness chains: high membership turnover and inconsistent engagement across branches. By building a unified **Star Schema** and **Power BI Dashboard**, we have transformed raw activity logs into a clear operational roadmap.

2. Key Performance Insights

Financial Performance (Revenue)

- **Expansion Trend:** The **Total Revenue** shows a steady month-over-month growth, supported by the **MOM Growth %** measure.
- **Top Performers:** **Tunis Lake** and **Sousse Corniche** emerge as the revenue leaders, driven by high-tier **VIP** and **Annual** memberships.
- **Revenue Efficiency:** The **Average Revenue per Member** remains highest in branches with integrated personal training services.

Member Engagement (Activity)

- **Attendance Patterns:** Most visits occur during the 17:00–21:00 window, identifying a clear need for increased staff during these "peak slots."
- **Class Occupancy:** Group classes show a **75% average occupancy rate**, with high demand for Yoga and CrossFit across all major branches.
- **Visit Frequency:** Highly active members (3+ visits/week) have a significantly lower churn probability compared to infrequent visitors.

Retention & Churn

- **Retention Rate:** The network maintains a **healthy retention rate**, but a noticeable drop is seen after the 3rd month of "Student" memberships.
- **Churn Drivers:** Lack of class bookings is the #1 leading indicator of a member who is likely to cancel within the next 30 days.

3. Strategic Recommendations

1. **Personalized Retention:** Automate "We miss you" email triggers for members who haven't visited in over 10 days.
 2. **Capacity Optimization:** Shift high-demand trainers from Sfax to Nabeul during weekend peak hours to improve **Trainer Utilization**.
 3. **Tier Conversion:** Launch a "VIP Upgrade" campaign in Tunis Lake targeting high-engagement "Monthly" members.
-

4. Final Storytelling Summary

Through this BI implementation, PulseFit has moved from **reactive management** to **proactive growth**. We no longer just "run a gym"; we manage a data-driven ecosystem where every visit is a signal and every payment is an investment in long-term health and profitability.

*[!NOTE] **Delivery Status:** This document concludes the Week 4 deliverables. The insights presented here are designed to accompany the visual storytelling shown in the Power BI dashboard pages.*
